EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis Woo on 7/7/2008.

Claim 40. A digital signal recording apparatus adaptable to be used at least by a decoding apparatus and/or a player, the signal recoding apparatus having an area storing an audio title set (ATS), the audio title set (ATS) including data representing a digital audio signal resulting from steps including (1) quantizing a first original audio signal at a first quantization word length and a first sampling frequency, (2) quantizing a second original audio signal into a quantization-resultant audio signal at a second quantization word length and a second sampling frequency, and (3) subjecting the quantization-resultant audio signal to a bit shift, the first original audio signal being in a front channel (Lf, Rf) group having multiple channels, the second original audio signal being in a rear channel (Ls, Rs) group having multiple channels, the first sampling frequency being assigned to each of the channels in the first channel group, the second sampling frequency being assigned to each of the channels in the second channel group, the bit shift having a quantity common to the channels in the second channel group;

the audio title set (ATS) including data representing the first quantization word length and first sampling frequency and the second quantization word length and second sampling frequency, data representing the quantity of the bit shift and channel assignment information for identifying the channels in the first channel group and the channels in the second channel group;

wherein when used with the decoding apparatus, the decoding apparatus utilizes the data in the audio title set (ATS) to decode the digital audio signal to the original audio signals.

Claim 42. An apparatus for decoding the digital audio signal recorded on the digital signal recording apparatus of claim 40, the audio signal being in the first channel group and the second channel group, the apparatus comprising: means for generating the data representing the first quantization word length and the first sampling frequency and the second quantization word length and the second sampling frequency, the data representing the quantity of the bit shift, and the channel assignment information for identifying the channels in the front channel group and the channels in the rear channel group; and means for decoding the digital audio signal in the front channel group and the rear channel group in response to the first quantization word length and the first sampling frequency, the second quantization word length and the second sampling frequency, the quantity of the bit shift, and the channel assignment information.

Claim 43. A player for reproducing audio contents from the digital signal recording apparatus of claim 40 which stores the audio signal in the front channel group and the rear channel group, the player comprising: means for generating the data representing the first quantization word length and the first sampling frequency and the second quantization word length and the second sampling frequency, the data representing the quantity of the bit shift, and the channel assignment information for identifying the channels in the front channel group and the channels in the rear channel group; means for decoding the digital audio signal in the front channel group and the rear channel group in response to the first quantization word length and the first sampling frequency, the second quantization word length and the second sampling frequency, the quantity of the bit shift, and the channel assignment information; and means for implementing digital-to-analog conversion of the decoding-resultant audio signal to recover a corresponding analog audio signal.
